Customer Journey Map

For your **Credit Card Approval Prediction System**, you can use a simple **3-stage Journey Map** like this in your project report or presentation.

Stage	User Action	System Response	User Experience
1. Login	User logs into the web application using their credentials or creates a new account.	System authenticates the user and grants access to the dashboard.	User feels secure and ready to begin the application process.
2. Enter Applicant Details	User enters personal, employment, financial, and credit-related information.	System validates the input data and checks for missing or invalid fields.	User expects an easy and error-free data entry process.
3. Submit Application	User submits the completed application for evaluation.	System preprocesses the data and sends it to the trained machine learning model.	User anticipates a quick prediction.
4. Prediction	User waits for the result.	The machine learning model predicts whether the application is likely to be approved or rejected.	User is curious and hopeful about the outcome.
5. View Result	User views the prediction result and eligibility status.	System displays Approved or Rejected , along with the confidence score or recommendation (if implemented).	User gains immediate insight into their eligibility and can decide on the next steps.
