

Data Flow Diagram

Date	1 July 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Data Flow Steps

Step	Description
1. User Input	The user enters applicant details such as personal information, employment status, income, and credit history through the Flask web application.
2. Data Validation	The system validates the entered data to ensure all required fields are complete and contain valid values.
3. Data Preprocessing	The input data is cleaned, encoded, and transformed into the format required by the trained machine learning model.
4. Machine Learning Prediction	The processed data is passed to the selected machine learning model (e.g., Random Forest or XGBoost), which predicts whether the applicant is likely to be approved or rejected.
5. Result Generation	The system generates the prediction result and, if applicable, a confidence score or risk assessment.
6. Display Output	The prediction is displayed on the web application, allowing the user or bank analyst to make an informed decision.
