

Project Executable Files

Date	1 July 2026
Team ID	XXXXXXX

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes/No/NA)
1	Complete source code (all files and folders)	YES
2	README / Setup Guide (instructions to run the project)	YES
3	requirements.txt / dependency file	NO
4	Database schema / seed files (if applicable)	NO
5	Environment configuration file (.env.example or similar)	NO
6	Deployed application URL (if hosted)	NO
7	Executable file (if applicable)	YES
8	Dockerfile / Containerization config (if applicable)	NO
9	Test files and test results	YES
10	Demo video or walkthrough (if required)	YES

Project Executable Files

Step 2: File / Folder Structure

```
CreditCardApprovalPrediction/  
|  
├── app.py          # Main Flask application  
├── model.pkl       # Trained ML model  
├── requirements.txt # Project dependencies  
├── README.md       # Project documentation  
|  
├── dataset/  
|   └── credit_card_data.csv # Training dataset
```

```

|
├── static/
│   ├── css/style.css
│   ├── js/script.js
│   └── images/
│       └── logo.png
├── templates/
│   ├── index.html
│   └── result.html
├── notebooks/
│   └── model_training.ipynb
├── screenshots/
│   ├── home_page.png
│   ├── prediction_page.png
│   └── result_page.png
└── docs/
    ├── Project_Report.pdf
    ├── SRS_Document.pdf
    ├── ER_Diagram.png
    ├── Data_Flow_Diagram.png
    ├── Architecture_Diagram.png
    └── Testing_Report.pdf

```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Localhost (Flask Application)
Login Credentials (Demo)	Not Required
Repository Link	GitHub Repository (Private/Local)
Demo Video Link	Available on request / Local demonstration

Step 4: Run Instructions

Credit Card Approval Prediction

Instructions to Run in Local

1 Clone the Repository

Open terminal or command prompt and run:

```
git clone https://github.com/your-username/credit-card-approval-prediction.git
```

2 Create a Virtual Environment (Recommended)

Run the following commands:

On Windows:

```
python -m venv venv  
venv\Scripts\activate
```

On macOS / Linux:

```
source venv/bin/activate
```

3 Install Required Dependencies

Run the following command:

```
pip install -r requirements.txt
```

4 Verify Project Structure

Make sure the following files/folders are present:

- app.py
- model.pkl
- templates/
- static/
- dataset/credit_card_data.csv

5 Run the Application

Start the Flask server by running:

```
python app.py
```

**Note:** Make sure you are inside the project directory (credit-card-approval-prediction) while running the above command.

6 Access the Application

Open your web browser and go to:

```
http://127.0.0.1:5000/
```

i Additional Information

- ▶ The app runs on the local server at port 5000 by default.
- ▶ Make sure you have Python 3.8 or above installed.
- ▶ If port 5000 is already in use, you can change the port in app.py:

```
app.run(debug=True, port=5001)
```
- ▶ Ensure that model.pkl is in the root directory.

**Troubleshooting**

Module not found errors?
Run: `pip install -r requirements.txt`

Port already in use?
Change the port in app.py (e.g., port=5001)

Model not loading?
Ensure model.pkl exists in the project root directory.

**You're All Set!**

The Credit Card Approval Prediction application should now be running successfully on your local machine.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Model accuracy may vary with different input data.	Continuously retrain the model with new data to improve accuracy.
2	Application runs on local server only.	Deploy on cloud platform (e.g., Render, Heroku, AWS) for public access.
3	Limited to the features present in the dataset.	Include more relevant features to improve model performance.
